## Brief overview of Flow Process

	Violet DAPI	Green GFP	Orange Propidium Iodide
Cell 1	200	30	30
<b>Cell 2</b>	<b>230</b>	<b>175</b>	<b>40</b>
Cell 3	250	50	50
Cell 4	180	190	60
Cell 5	200	46	70

Gating is used to derive data, but it helps us clean up data.

# Gating

## Variability enemy of statistics

# H62 and FDA references to rare cells

“To define a cell population [to gate it] and allow reproducible enumeration it has been recommended that 20-50 clustered events be present...” H62

Desired CV	1%	2.5%	5%	10%	20%
Required Events for the Population of Interest	10 000	1600	400	100	25
Population of Interest Frequency, %	Total Number of Acquired Events				
10	100 000	16 000	4000	1000	250
1	1 000 000	160 000	40 000	10 000	2500
0.1	10 000 000	1 600 000	400 000	100 000	25 000
0.01	100 000 000	16 000 000	4 000 000	1 000 000	250 000
0.001	1 000 000 000	160 000 000	40 000 000	10 000 000	2 500 000

**Poisson distribution**  
How many cells we need?!

# Poisson counting statistics

$$CV, \% = \frac{\sqrt{N}}{N}$$

$$CV = \frac{\sqrt{11}}{11} = 30.2\%$$

$$CV_{\text{experiment}} = 48.4\%$$

Binomial

Poisson

*time*

## Variability enemy of statistics

# Sources of Variability for cells

- Population separation
- Blood Lysis vs. PBMC
  - Debris and Viability
- Analysts
- Instruments
- Temperature
- Centrifugation, xg force
- Type of assay
  - Intracellular
  - PhosphoFlow
- Logistics
- Sample type
- Analysis of data

**DRUG DEVELOPMENT  
SOLUTIONS**

# Phosphorylated Biomarker MD

- Very low frequency
- Expressed in cell lines
- Mitosis biomarker
- Predictive in number of tumours as progression marker
- Matrix is rare
- Not every patient expresses biomarker of interest
- This was whole blood assay

**DRUG DEVELOPMENT  
SOLUTIONS**

# H62 Specificity and Gating

“...Once gating strategy is determined the results should be verified against reference or comparative method.....”

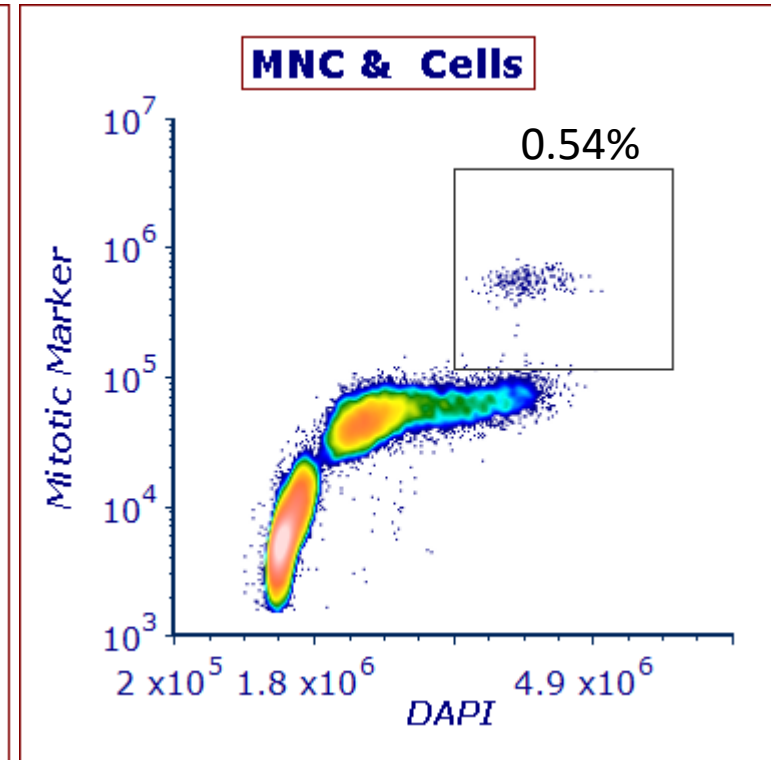

“...final document should provide how gating was designed to ensure specificity”

# Spiked healthy individuals

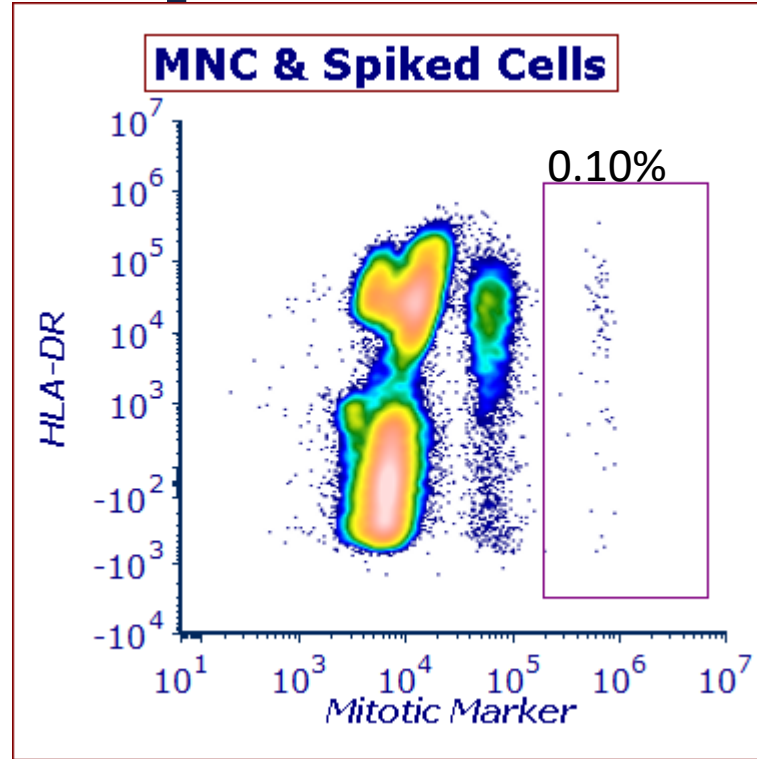

0.177% of total  
CV=4.04

0.18% of total  
CV=2.71

# Spiked healthy individuals

0.03% of total  
CV=15.71% of  
Blast gate

0.03% of Blast gate  
CV=8.32%

# Disease Matrix

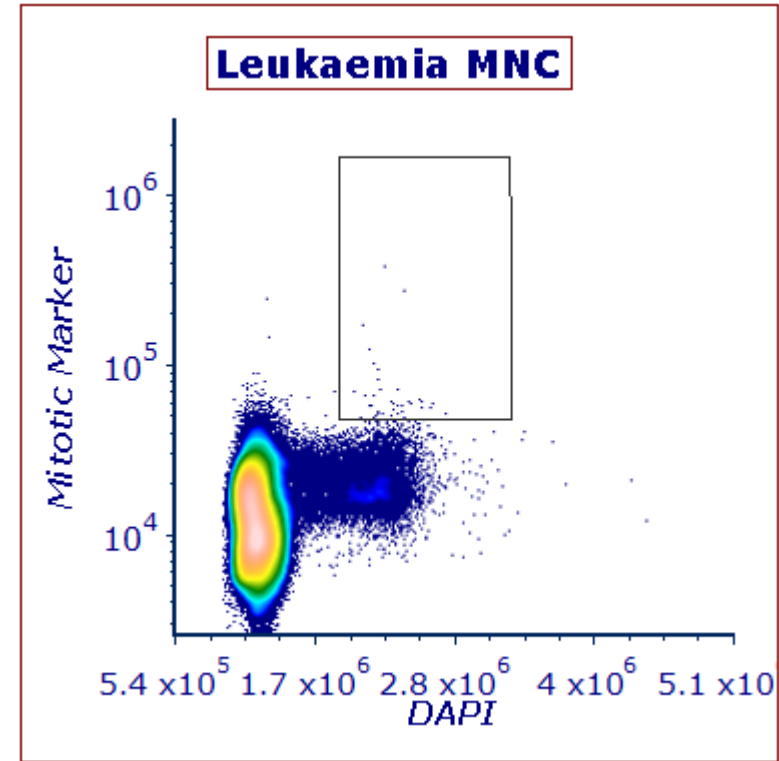

**High Concordance!!!**

# Disease Matrix

0.1% of blasts  
CV=0%

0.01% of blasts  
CV=0%

# Conclusion

**DRUG DEVELOPMENT  
SOLUTIONS**  
Part of Alliance Pharma, Inc.

- Plan should contain descriptive element of gating: Clustered events, Pattern
- Gating strategy comes first!
- Effective gating strategy for biomarker and disease
- Inclusion of further means to resolve population may improve specificity and sensitivity
